

Allicillin™

GARLIC SULFIDES

60 SOFTGELS | NPN80073591 | ALLS60-CN

GASTROINTESTINAL HEALTH

Designs for Health's **Allicillin™** consists of a blend of garlic oil and parsley oil to support immune and cardiovascular health. The garlic oil in Allicillin™ provides 10.7 mg per 1 softgel serving of diallyl trisulfide, which is one of the primary bioactive and bioavailable compounds in garlic. The formula is designed with an enteric coating to help minimize potential garlic odour. Additionally, the parsley oil may serve as a breath freshener.

Garlic contains many compounds that may promote a broad range of health benefits. These beneficial compounds appear only when the fresh garlic cloves of the plant are crushed, chopped, or chewed. Allicillin™ offers beneficial compounds of garlic in a bioavailable form. Garlic sulfides are primary compounds in garlic that may promote healthy immune responses. Garlic sulfides may also support cardiovascular health.

Benefits

- Supports immune health
- Promotes a healthy microbial environment
- Supports proper inflammatory responses
- Promotes liver health

Recommended Dose

Adults: Take 1 softgel once per day, or as recommended by your health care practitioner. For use beyond 2 weeks, consult a healthcare practitioner.
